

a sea change

IMAGINE A WORLD WITHOUT FISH

Imagine a world without fish: It seems inconceivable. But top scientists warn that such a catastrophe may in fact play out in coming generations unless action is taken to stop ocean acidification – the flip side of climate change that is changing the chemistry of our planet's oceans.

“an adorable "About Schmidt"-like road trip to meet the world's leading oceanographers and global warming experts to better understand the magnitude of the problem [Ocean Acidification], and learn how to start curing it...Like "An Inconvenient Truth," this film is both a love letter to the planet and an urgent plea to its citizens.”

—Justin Berton,
San Francisco Chronicle
